One tasty treat protects dogs and puppies for 12 weeks against fleas, ticks and mites or one convenient spot on will protect against ticks for 4 months and fleas for 6 months.

Let us help you get rid of that flea infestation, contact us today.

Post 4: Where do fleas hide - dogs

The real dangers of ticks

The potential risks ticks pose to pets can be stressful to pet parents. We worry about your pet's health too!

Ticks carry parasites which can enter your pet through their bite and cause, for example, biliary – a deadly disease.

Bravecto® kills multiple different species of ticks commonly found on puppies and dogs, including the 2 most common in South Africa that transmit biliary. Bravecto® Chew will protect your pup against those nasty ticks for 12 weeks in a single tasty chew or Bravecto® Spot On for dogs will protect for 4 months against ticks.

Call us today to discuss your pet's risk for tick infestations and to choose the Bravecto® product that suits your pet. Prevention is better than cure.

Post 5: Don't let ticks

Post 9: Biliary Info

12 WEEKS

REDUCE THE TRANSMISSION OF BILIARY WITH JUST ONE DOSE

Biliary is a serious disease transmitted to dogs by tick bites. Ticks need to feed on the dog for transmission to occur.

Biliary parasites infect red blood cells, causing their rupture.

EXTENDED

BRAVECTO® CHEW AND BRAVECTO® SPOT-ON FOR DOGS

Bravecto's high efficacy drastically reduces the transmission of six borne diseases in 100 ticks within 48h, within 12 hours of feeding and 100% within 24 hours, thus minimizing the risk of transmission of Biliary.

BRAVECTO®'s long period of 12 weeks offers ease of use.

BRAVECTO®'s long period of 12 weeks offers ease of use.

ELIMINATE TICKS WITH BRAVECTO®

Reduce the transmission of Biliary while protecting your dog with extended duration protection against ticks and fleas in a single dose.
